Hazardous Waste Disposal Procedures

Introduction to Waste Disposal

Most wastes generated in the laboratories and shops located on campus are prohibited from disposal in the regular trash or down the drain. Many of these wastes are regulated under the federal Resource Conservation and Recovery Act (RCRA).

The term hazardous waste is defined under RCRA as solids, liquids, and gases that exhibit certain characteristics or are specifically listed in the rules. Hazardous waste is regulated under a “cradle to grave” concept, meaning that the waste is tracked via written records from the time it becomes a waste, and that ownership remains with the generator forever. Therefore, the best method to reduce the risk of future remediation costs is to reduce the amount of hazardous waste generated. It is essential to consider the amounts and types of wastes that will be generated when a project is in the proposal stage in order to ensure that a disposal method exists that is both legal and affordable—and to minimize the amount of waste generated. Every person responsible for the generation of waste at MTU must understand the proper disposal procedures and the requirements of the Michigan hazardous waste rules under RCRA.

Rules for Hazardous Waste Accumulation

1. A generator must perform a “waste determination” to see if a waste is regulated under RCRA. That determination can be based on the generator’s knowledge of the waste composition or through chemical analysis if the composition is unknown. The waste determination must be made no later than the moment a substance becomes a waste. Documentation supporting this waste determination must be kept on file for three years.
2. Hazardous waste must be accumulated and stored at the point of generation until removed by OSHA and must be:
 - a. Collected in a container that is compatible with its contents under all conditions that it might be subjected to during accumulation, storage,

- and shipment.
- b. Kept tightly sealed except when adding waste to the container.
 - c. Handled only by personnel trained in the requirements of these hazardous waste rules.
 - d. Removed from the accumulation area within three days if the quantity of any one waste exceeds fifty-five gallons. (From a safety perspective, no more than five gallons should be accumulated in a laboratory or shop.)
 - e. Labeled with the words “hazardous waste,” the waste identification number (see below), the accumulation start date, and a chemical description.

Hazardous Waste Determination

Waste determination involves comparing the characteristics and composition of the waste to the descriptions and tables contained in the hazardous waste rules. The basic process involves answering the following questions:

- Is the waste specifically listed in any of the tables (see below)?*
- Does the waste meet the definition of ignitability (see below)?*
- Does the waste meet the definition of corrosivity (see below)?*
- Does the waste meet the definition of reactivity (see below)?*
- Does the waste meet the definition of toxicity (see below)?*

If the answer to *any* of these questions is *yes*, the waste is regulated and the rules in 2 (a-e), above, apply. If the answer to *all* of the questions is *no*, the rules in 2 (a-e) apply except that the words “hazardous waste” and the waste identification number may be omitted from the label.

Waste Descriptions

Ignitability

A waste is ignitable (and is identified by the hazardous waste number D001) if a representative sample of the waste has any of the following properties:

- It is a liquid and has a flash point less than 60 degrees Centigrade (140 degrees Fahrenheit).
- It is not a liquid and is capable, under standard temperature and pressure, of causing fire through friction, absorption of moisture, or spontaneous chemical changes, and, when ignited, burns so vigorously and persistently that it creates a hazard.
- It is an ignitable compressed gas as defined in the provisions of 49 C.F.R. §173.115. (Gas in a cylinder will likely have a flammable gas label.)
- It is an oxidizer as defined in the provisions of 49 C.F.R. §173.127.

Corrosivity

A waste is corrosive (and is identified by the hazardous waste number D002) if a representative sample of the waste has either of the following properties:

- It is aqueous and has a pH less than or equal to 2, or greater than or equal to 12.5.
- It is a liquid and corrodes steel (SAE 1020) at a rate of more than 6.35 mm (0.250 inch) per year at a test temperature of 55 degrees Centigrade (130 degrees Fahrenheit)—as determined by the test method specified in the National Association of Corrosivity Engineers (NACE) standard TM-01-69.

Reactivity

A waste is reactive (and is identified by the hazardous waste number D003) if a representative sample of the waste has any of the following properties:

- It is normally unstable and readily undergoes violent change without detonating.
- It reacts violently with water.
- It forms potentially explosive mixtures with water.
- When mixed with water, it generates toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.
- It is a cyanide or sulfide-bearing waste that, when exposed to pH conditions between 2 and 12.5, can generate toxic gases, vapors, or fumes in a quantity sufficient to present a danger to human health or the environment.
- It is capable of detonation or explosion if it is subjected to a strong initiating source or if heated under confinement.
- It is readily capable of detonation or explosive decomposition or reaction at standard temperature and pressure.
- It is a forbidden explosive as defined in the provisions of 49 C.F.R. §173.54, or it meets the definition of a class 1/division 1.1, 1.2, or 1.3 explosive as defined in the provisions of 49 C.F.R. §173.50.

Toxicity

A waste is toxic if, using the toxicity characteristic leaching procedure, the extract from a representative sample of the waste contains any of the contaminants listed in Table 201a at a concentration equal to or greater than the respective values given in the table. If the waste is a liquid and contains less than 0.5 percent filterable solids, then the waste itself is considered to be the extract for the purposes of this rule.

A waste exhibits the characteristic of severe toxicity if the waste contains 1 part per million or more of a severely toxic substance listed in Table 202.

Waste Number	Chemical Name and Description
F001	The following spent halogenated solvents used in degreasing: tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1 trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures and blends used in degreasing containing, before use, a total of 10% or more, by volume, of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F002	The following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, orthodichlorobenzene, trichlorofluoromethane and 1,1,2-trichloroethane; all spent solvent mixtures and blends containing, before use, a total of 10% or more, by volume, of one or more of the above halogenated solvents or those solvents listed in F001, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F003	The following spent nonhalogenated solvents: xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures and blends containing, before use, only the above spent nonhalogenated solvents; and all spent solvent mixtures or blends, containing before use, one or more of the above nonhalogenated solvents, and a total of 10% or more, by volume, of one or more of those solvents listed in F001, F002, F004, and F005 and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F004	The following spent nonhalogenated solvents: cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures and blends containing, before use, a total of 10% or more, by volume, of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F005	The following spent nonhalogenated solvents: toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures and blends containing, before use, a total of 10% or more, by volume, of one or more of the above nonhalogenated solvents or those solvents listed in F001, F002 and F004; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.
F027	Discarded unused formulations containing tri- tetra-, or pentachlorophenol or discarded unused formulation containing compounds derived from these chlorophenols. This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component.

Note: MTU may not generate more than 1Kg of waste meeting this description.

Discarded Commercial Chemical Products (including off-specification species, containers, container residues, and spill residues)

The following materials or items are hazardous wastes when they are discarded or intended to be discarded as described:

- Any commercial chemical product or manufacturing chemical intermediate having the generic name in tables 205a, 205b, and 205c.
- Any off-specification commercial chemical product or manufacturing intermediate which, if it met specifications, would have the generic name listed in tables 205a, 205b, and 205c.
- Any material that remains in a container, or in an inner liner which is removed from a container, that has the generic names listed in tables 205a, 205b, and 205c of these rules, unless the container is empty.
- Any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into any water or on any land of any commercial chemical product; a manufacturing chemical intermediate having the generic name listed in tables 205a, 205b, and 205c of these rules; any residue or contaminated soil, water, or other debris resulting from the cleanup of a spill into any water or on any land of any off-specification chemical product; and manufacturing chemical intermediate which, if it met specifications, would have the generic name listed in tables 205a, 205b, and 205c of these rules.

The phrases “commercial chemical product,” “manufacturing chemical intermediate,” “off-specification commercial chemical product,” and “manufacturing chemical intermediate” refer to materials that are manufactured or formulated for commercial or manufacturing use. The phrases do not refer to materials, such as manufacturing process wastes, that contain any of the substances listed in tables 205a, 205b, or 205c of these rules nor do they include wastes resulting from the use of these substances.

MTU is limited to the possession of no more than 1 kg of a waste listed in Table 205a (including the container, other components of a mixture or solution, and spill cleanup debris). Employees who think they might need to purchase one of the substances listed in table 205a should first notify Occupational Safety and Health Services.
